

# Chemdose 2

## Precision Chemical Dosing System

The Dramm CD2 Chemdose is the next generation in precision dosing technology. Eliminating the limitations of power and hose-length constraints, the CD2 is powered by a rechargeable battery. Designed for use with a hydraulic sprayer or a chemical injector, the CD2 precisely measures each dose from any source below 100 psi and applies it directly to the pot. The Chemdose 2 can either be worn or mounted on a small cart, making the unit extremely portable. Perfect for the application of systemic insecticides or plant growth regulators.

- **Precisely measures chemical doses.**
- **Works with either single shot or interval based doses.**
- **Works with an injector or sprayer. Any source less than 100 psi.**
- **Advanced features such as dose count, maximum number of doses and control lock-out**
