

## Canadian Rate Chart - PulsFOG

On average, 130 liters of water is used on 10,000 square feet. To determine the amount of chemical needed in 10,000 feet, multiply the 100 liter rate (in ml, cc, g, oz...) by 1.3. After you are comfortable with the PulsFOG lower rates may be used. At this time multiply the 100 liter rate by 0.9. Mix this amount of chemical with the appropriate carrier per 10,000 sq.ft. Use the chart below as a guide.

| 100 liter label rate<br>(independent of scale<br>ml, oz, cc, g...) | High Rate                                      | Low Rate                                       | Nutrifog                               | VK-II                               |                                     | VK-I                               |
|--|--|--|--|-------------------------------------|-------------------------------------|------------------------------------|

**Note:** When using NutriFOG do not apply at an interval less than 5 days. The total application of NutriFOG should not exceed 1.5 liters/10,000 sq ft in one month. If using WP formulations do not exceed a concentration higher than 80g/liter of water. If necessary, add water. NutriFOG should be combined with the same amount of water as you would use with VK-II.
