

# VILLA Irrigation Controller

WiFi

Bluetooth®

Easy to Program  
on Unit  
via Bluetooth (APP)  
via WiFi (APP & WEB)

Easy to Install  
WAPO connectors  
no tools needed

## VILLA AC Powered WiFi Programmed controller

The Villa 6 and 12 station controllers offer unmatched access and ease of programming to control your irrigation systems. The Villa can be programmed via its onboard screen, a Bluetooth connection or a WiFi connection. Connect via a web browser or via the My Solem app (iOS and Android) for easy updating, manual operation or adjustments. Connect multiple controllers to your account to access different controllers from one screen.

The Villa offers three different start programs to group valves together and can have up to 8 start times per day, per program.

Irrigation cycles can range from 1 minute to 12 hours. A water budget feature allows you to adjust all irrigation valve run times by a percentage to increase or decrease the irrigation cycles as needed.

The Villa Controller has two dry contact/pulse inputs to help improve your efficiency and automation. An optional flow meter, rain sensor and pressure sensor can all be added to provide feedback and influence irrigation cycles.

### Specifications

Power: 120v input - cord included  
24v AC output

Outputs: 6 or 12

Remote Control: Phone App, Tablet App, Web Page

WAPO Easy Connections

UV Stable Enclosure

Dimensions: 7" x 9.3" x 3.25" (WxHxD)
