

K-40 pulsFOG®

K-40 pulsFOG®

The K-40 PulsFOG can treat 120,000 square feet in one hour with an ultra-fine chemical fog. Utilizing a 125 hp pulse jet engine, the K-40 can throw the chemical fog up to 360' from the operator.

The K-40 utilizes the patented, BIO-Fogging technology that water cools the exhaust, allowing for even heat sensitive products to be applied safely. The unit comes standard with two 50 liter tanks that can be upgraded to 100 liters if necessary.

The entire system is made from stainless steel and other corrosion resistant materials ensuring a long life.

PulsFOG units usually require the addition of a carrier solution, added to the water and chemical mixture, for best operation. Contact Dramm for the proper solution for your needs.

Specifications

Power - 125 hp

Nozzles - 6

Fuel Tank - 20 liters

Battery Required to Start - 12V (not included)

Output - 10 liters in 5 minutes

Bio System - Applies heat-sensitive solutions

Tank Capacity - 2: 50 liter or 2: 100 liter

Propulsion Distance VK II/NF - 300'
