The Dramm FC50-A-DT Ferticart is a durable fertilizer stock solution cart and tank with on-board agitation.

The AC powered pump provides up to 5 gallons per minute of agitation and uses our unique agitation bar to keep stubborn chemicals in solution.

The FC50-A-DT includes air injection to aerate the tank. This system will maintain saturation levels of dissolved oxygen and can help keep nematodes viable during application.

This model of the Ferticart is designed for use with the Dosatron D8 Range injector with a maximum flow rate of 40 gpm. The unit comes complete with all plumbing, including a 200 mesh filter, a check valve and unions to make assembly easy.

**Specifications**

- 50 gallon capacity
- Kits to fit most injectors available
- Rubberized wheels and casters
- Dimensions: L: 50” W: 27” H: 50”
- Drain valve for easy clean-out
- Vinyl coated steel frame
