The Microfit Herbi System

Fast, Effective Chemical Application Technology

THE INTERCHANGEABLE

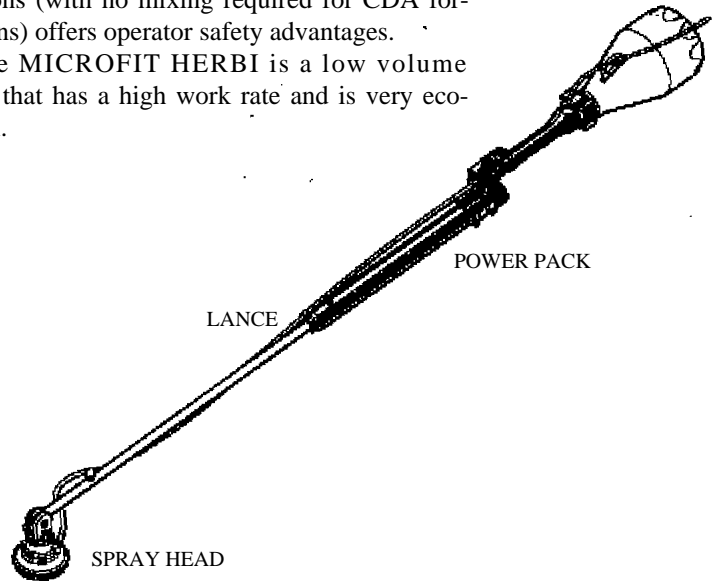

MICRON HERBI

250 microns, minimize the risk of spray drift, and fall in a precise 4 ft. wide circular spray pattern. *Herbaflex* and *Herbi-Twin* attachments are available for narrower or wider band widths.

The HERBI is used worldwide for band spraying and can treat several acres in one hour. Uses include general clean-up, border pathway or strip spraying (e.g. in forestry and plantations) and spraying of larger areas by making consecutive spray passes. The reduction in mixing and filling operations (with no mixing required for CDA formulations) offers operator safety advantages.

The MICROFIT HERBI is a low volume sprayer that has a high work rate and is very economical.

The MICROFIT HERBI, part of the modular MICROFIT system, is a spinning disc sprayer for the Controlled Droplet Application (CDA) of herbicides and other chemicals. It can apply CDA formulations or traditional water-based products at total spray volumes of only 5-20 liters/acre. The consistently large spray droplets, of around

Features

- Light weight, portable machine
- Minimizes spray drift
- Battery powered with no pumping required
- Shoulder Strap, 2.5 liter bottle
- Optional extras:
 - *Herbaflex* and *Herbi-Twin* lances

Technical Data

Power Supply.....	6V DC, (4-D Cell/R20 batteries)
Power Consumption.....	.5 watts (over 40 hours spraying with good quality batteries)
Weight -empty.....	3.5 lbs (1.5 Kg. with 2.5 liter bottle)
-ready to spray.....	9 lbs (4.0 Kg. with 2.5 liter bottle)
Disc Speed.....	2,000 rpm
Flow Rate Range.....	2-5 oz (60-150ml)/min
Droplet Size (VMD).....	200-300 μ (microns)
Band Width.....	4 ft. (1.2 m)

MICROFIT HERBI SYSTEM

MICRON HERBAFLEX

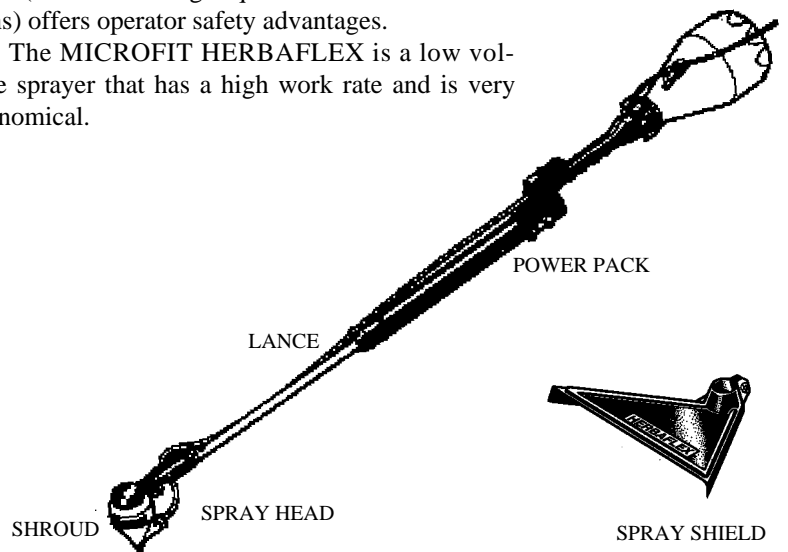

The MICROFIT HERBAFLEX, part of the modular MICROFIT system, is a shrouded, spinning disc sprayer for the Controlled Droplet Application (CDA) of herbicides and other chemicals. The shielded HERBAFLEX atomizer allows greater control of all applied chemicals. The standard shroud has an adjustable band width of 4-20

inches, and with an optional attachment the band width increases to 6-30 inches. This shroud recaptures any unsprayed solution and allows it to be reused while preventing dripping or over spray. With the addition of the Herbi Spray Shield, drift due to wind and mis-spraying are eliminated.

The HERBAFLEX is used worldwide for band spraying narrow strips of weeds. Uses include general clean up around buildings, border pathway and strip spraying (e.g. fencelines) and in between crop rows. The reduction in mixing and filling operations (with no mixing required for CDA formulations) offers operator safety advantages.

The MICROFIT HERBAFLEX is a low volume sprayer that has a high work rate and is very economical.

Features

- Light weight, portable machine
- Minimizes spray drift
- Battery powered with no pumping required
- Spray Shield
- Optional extras:
 - Herbi and Herbi-Twin lances

Technical Data

Power Supply	6V DC, (4-D Cell/R20 batteries)
Power Consumption	1.0 watts (over 30 hours spraying with good quality batteries)
Weight -empty	3.5 lbs (1.5 Kg. complete with 2.5 liter bottle);
-ready to spray	9 lbs (4.0 Kg. complete with 2.5 liter bottle)
Disc Speed	2,800 rpm
Flow Rate Range5 oz-1.33 oz (15-40 ml)/min
Droplet Size (VMD)	200 μ (microns)
Band Width	4-20 in. (10-50 cm-standard A 90 shroud)
	6-30 in. (15-75 cm-optional B 120 shroud)

MICRON HERBI-TWIN

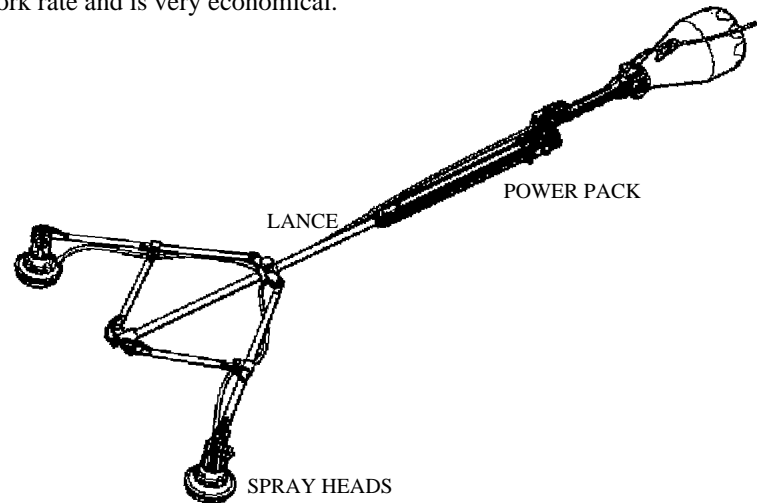

The MICROFIT HERBI-TWIN, part of the modular MICROFIT system, is a twin-head spinning disc sprayer for the Controlled Droplet Application (CDA) of herbicides and other chem-

icals. The HERBI-TWIN greatly reduces time by doubling the area covered per pass. The twin disks create an adjustable band width of 5.5-7.5 ft. for maximum dispersal of chemical.

The HERBI-TWIN is used for wide band spraying. Uses include pathway or strip spraying (e.g. in orchards and plantations) and spraying of larger areas by making consecutive spray passes. The reduction in mixing and filling operations (with no mixing required for CDA formulations) offers operator safety advantages.

The MICROFIT HERBI-TWIN is a low volume sprayer that has a high work rate and is very economical.

Features

- Light weight, portable machine
- Minimizes spray drift
- Battery powered with no pumping required
- Optional extras:
 - *Herbaflex* and *Herbi* lances

Technical Data

Power Supply	6V DC, (4-D Cell/R20 batteries)
Power Consumption	1.0 watts (over 30 hours spraying with good quality batteries)
Weight -empty	4.5 lbs (2.0 Kg. complete with 2.5 liter bottle)
-ready to spray	10 lbs (4.5 Kg. complete with 2.5 liter bottle)
Disc Speed	2,000 rpm
Flow Rate Range	2-5 oz (60-150ml)/min
Droplet Size (VMD)	200-300 μ (microns)
Band Width	5.5 - 7.5 ft. (1.8 - 2.4 m)
